

If neo4j fails, it might be beneficial to do this:

```
chown -R neo4j:neo4j /path/to/graphdb/graph.db/
```

Set powershell bypass again:

```
powershell -ep bypass
```

Now we need to pull the data:

```
.. \SharpHound.ps1
```

And invoke it

```
Invoke-BloodHound -CollectionMethod All -Domain MARVEL.local -ZipFileName  
file.zip
```
